

Redis Cloud Terraform provider

[Terraform](#) is an open source automation tool developed by Hashicorp that allows you to easily provision infrastructure as code.

Redis develops and maintains a [Terraform provider for Redis Cloud](#). The Redis Cloud Terraform provider allows many of the same actions as found in the [Redis Cloud API](#).

 | **Note:** The Redis Cloud Terraform provider supports Flexible subscriptions. It does not support Fixed subscriptions.

See [Get started with Terraform](#) for an example of how to use the Terraform provider.

Data sources and Resources

The Terraform provider represents API actions as data sources and resources. Data sources are read-only and allow you to get information, while resources allow you to create and manage infrastructure.

The Redis Cloud Terraform provider allows for the following data sources:

- [Subscriptions](#)
- [Databases](#)
- [Database modules](#)
- [Cloud accounts](#)
- [Supported persistence options](#)
- [Payment methods](#)
- [Supported cloud provider regions](#)
- [VPC peering connections](#)

It also allows you to create and manage the following resources:

- [Subscriptions](#)
- [Databases](#)
- [VPC peering connections](#)
- [Cloud accounts](#)
- [Active-Active subscriptions](#)
- [Active-Active databases](#)
- [Active-Active regions](#)
- [Active-Active VPC peering connections](#)
